

# Installing and updating Python packages in Pyramid

1. Click on the Admin Console > AI and ML > ML Environments > select the Python environment with the latest version available.

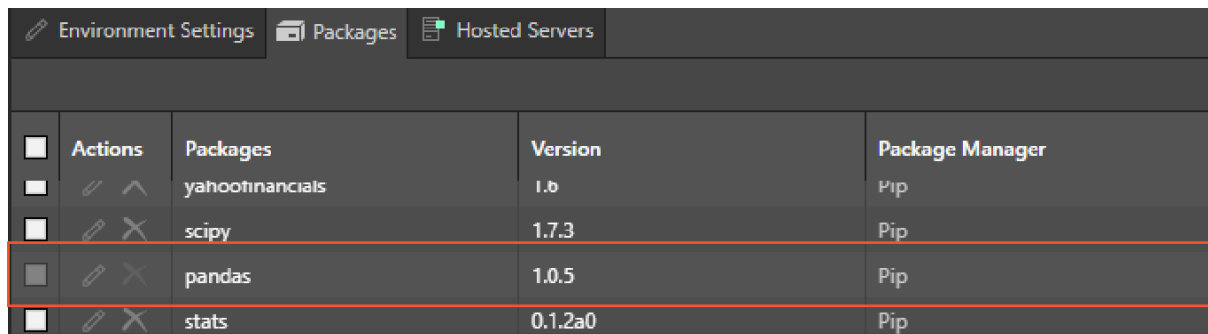

2. Select the environment > Packages > Add Package. Type the package name you wish to install and click ok.

- In about 10-15 seconds, you will notice a green dot appearing under status. This will indicate that the package has been installed successfully.

- Click on packages and you will see the newly added package to the list. This package is now ready to be used with a python node (regular script or Learn & Predict script).

Actions	Packages	Version	Package Manager
<input type="checkbox"/>	yahootnancials	1.0	Pip
<input type="checkbox"/>	scipy	1.7.3	Pip
<input type="checkbox"/>	pandas	1.0.5	Pip
<input type="checkbox"/>	stats	0.1.2a0	Pip

## Updating the version of existing packages

On Packages, click on 'edit', and update the version number. After a few seconds, you will see the package version number has been updated.

\* Version 1.0.5 recommended.
